Ondo State, Nigeria

PROFESSIONAL PROFILE

A results-driven Python Developer and Data Scientist with hands-on experience building and deploying full-stack web applications and data-driven solutions. Currently pursuing a B.Tech in Logistics and Transport Technology at FUTA, with a strong foundation in backend engineering, RESTful APIs, machine learning, and data analysis. Passionate about solving real-world problems at the intersection of software, data, and transportation technology.

TECHNICAL SKILLS

Languages: Python, HTML/CSS, JavaScript, R

Backend: Flask / Jinja2, FastAPI, SQLite, PostgreSQL, REST APIs

Frontend: Bootstrap 5, Tailwind CSS, Responsive Design

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Plotly, Scikit-learn

Machine Learning: Regression, Decision Trees, Random Forest, Model Evaluation

Automation & Tools: Selenium, BeautifulSoup, Jupyter Notebooks, Git / GitHub

Deployment: Render, CI/CD Pipelines, Session Management

INTERNSHIP EXPERIENCE

Data Science Intern | Codveda

2026 (1 Month)

- Completed a structured data science internship focused on applied machine learning and exploratory data analysis on real-world datasets
- Delivered the Boston Housing & Transit Analysis project as the primary internship output published as an open-source Jupyter Notebook on GitHub
- Implemented a full ML pipeline spanning data cleaning, EDA, regression, classification, clustering, and model evaluation
- Applied both supervised and unsupervised learning techniques, producing professional visualizations and a structured findings report

Machine Learning Intern | NVERON

2026 (1 Month)

- Completed a one-month ML internship gaining structured exposure to machine learning workflows in a professional environment
- Participated in applied ML tasks involving data preprocessing, feature engineering, model training, and performance evaluation
- Collaborated within a team to solve data-driven problems and communicate model results clearly

PROJECT EXPERIENCE

PDF2Audio Converter — Full-Stack Web App

- Engineered a full-stack web app converting PDFs and plain text into high-quality MP3 audio using Google TTS (gTTS)
- Implemented PDF text extraction with PyPDF2 and intelligent audio chunking for long documents
- Designed responsive Bootstrap 5 UI with real-time preview playback and direct download functionality
- Deployed on Render with automated CI/CD and persistent session handling

Tech: *Python, Flask, gTTS, PyPDF2, Bootstrap 5, Render*

MyPersonal Bible App — Full-Stack Web App

- Developed a serene Bible reading web app with full chapter browsing, multi-version support, and powerful search
- Integrated public Bible REST API for real-time Scripture retrieval and daily verse rotation
- Built clean, mobile-optimized interface with book/chapter navigation for spiritual reflection
- Deployed on Render with seamless continuous deployment pipeline

Tech: *Python, Flask, Bootstrap 5, REST APIs, Render*

Movie Collection Manager — Full-Stack CRUD App

- Built a full-stack Flask application with complete CRUD functionality and SQLite persistent storage
- Integrated TMDb API for real-time movie discovery and automated data retrieval
- Deployed on Render cloud platform with automated CI/CD pipeline

Tech: *Python, Flask, SQLite, Bootstrap, REST APIs, Render*

Traffic Congestion & Delay Prediction — Machine Learning

- Generated a synthetic transport dataset simulating traffic volume, weather, road conditions, and incidents using NumPy
- Performed EDA on hourly volume trends, rainfall impact, and accident-delay correlation using heatmaps, scatter plots, and box plots
- Trained and compared 6 models (Decision Tree, Random Forest, XGBoost) across congestion classification and delay regression tasks, evaluated with Accuracy, F1, MAE, RMSE, and R²

Tech: *Python, Pandas, Scikit-learn, Matplotlib, Jupyter Notebooks*

Traffic Volume Analysis — Exploratory Data Analysis

- Conducted end-to-end EDA on traffic count datasets to identify peak periods, seasonal trends, and anomalies
- Produced clear visual summaries of traffic patterns and flow metrics using Python visualization libraries
- Derived actionable insights to support traffic management decision-making

Tech: *Python, Pandas, NumPy, Matplotlib, Seaborn*

House Prices Prediction & Analysis — Codveda Internship Project

- Cleaned and preprocessed the Boston Housing dataset (14 features), conducted EDA using correlation heatmaps, scatter plots, and distribution plots to identify key price drivers
- Trained and evaluated Regression and Classification models (Linear Regression, Random Forest, Logistic Regression) using MSE, R^2 , Accuracy, F1-Score, ROC Curve, and AUC metrics
- Applied K-Means Clustering with PCA dimensionality reduction to segment neighbourhoods by transport and housing characteristics, and ranked feature importances from the Random Forest model

Tech: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly Express, Jupyter Notebooks

Automation & API Integration Projects

- ISS Overhead Notifier: Built real-time automation system sending alerts when the ISS is overhead using API integration
- Python Weather Notifier: Developed weather alert system integrating OpenWeatherMap API with Twilio SMS notifications

EDUCATION

B.Tech – Logistics and Transport Technology | Federal University of Technology, Akure (FUTA) *2021 – 2027 (Expected)*

- Specializing in Transport Planning, Systems Analysis, and Transportation Economics
- Relevant coursework: Data Analysis, Logistics Management, Transport Systems Modelling

WORK EXPERIENCE

Mathematics Teacher | Ark-Norm Schools *2021 – 2024*

- Designed and delivered comprehensive lesson plans for secondary school mathematics
- Demonstrated strong communication skills explaining complex concepts to diverse learners
- Consistently recognised for reliability, dedication, and problem-solving ability

CERTIFICATIONS

The Python Pro Bootcamp(100days of Code) – Udemy | Completed [\(Certificate\)](#)

- Completed training in Python programming, data science, automation, and web development

Tutor: Dr. Angela Yu

Machine Learning A-Z – Udemy (in-progress)

- Currently covering: supervised/unsupervised learning, model evaluation, and data preprocessing using Python & R

Tutor: Kirill Eremenko, Hadelin de Ponteves, SuperDataScience Team

Machine Learning Beginner — Sololearn | Completed

- Gained foundational knowledge of core ML concepts including supervised learning, model evaluation, and data preprocessing
