Ondo State, Nigeria

PROFESSIONAL PROFILE

An emerging Data Scientist and Machine Learning practitioner with a strong Python programming foundation and hands-on experience in data analysis, predictive modelling, and statistical analysis. Pursuing a B.Tech in Logistics and Transport Technology at FUTA, applying data science techniques to real-world transport and logistics problems. Proficient in the full data science pipeline from data collection and EDA to model building, evaluation, and visualization.

TECHNICAL SKILLS

Languages: Python, R, SQL

Data Manipulation: Pandas, NumPy

Machine Learning: Scikit-learn, Regression Models, Decision Trees, Random Forest, Model Evaluation, Cross-Validation

Data Visualization: Matplotlib, Seaborn, Plotly

Statistical Analysis: Descriptive Statistics, Hypothesis Testing, Correlation Analysis

Tools & Environment: Jupyter Notebooks, Google Colab, Git / GitHub, VS Code

INTERNSHIP EXPERIENCE

Data Science Intern | Codveda *2026 (1 Month)*

- Completed a structured data science internship focused on applied machine learning and exploratory data analysis on real-world datasets
- Delivered the Boston Housing & Transit Analysis project as the primary internship output published as an open-source Jupyter Notebook on GitHub
- Implemented a full ML pipeline spanning data cleaning, EDA, regression, classification, clustering, and model evaluation
- Applied both supervised and unsupervised learning techniques, producing professional visualizations and a structured findings report

Machine Learning Intern | NVERON *2026 (1 Month)*

- Completed a one-month ML internship gaining structured exposure to machine learning workflows in a professional environment
- Participated in applied ML tasks involving data preprocessing, feature engineering, model training, and performance evaluation
- Collaborated within a team to solve data-driven problems and communicate model results clearly

PROJECT EXPERIENCE

Traffic Flow Prediction — Machine Learning

- Built regression and decision tree models to predict traffic volume from historical count data
- Performed feature engineering and model evaluation using cross-validation and error metrics (RMSE, MAE)
- Visualized prediction outputs and trend lines using Matplotlib and Seaborn

Tech: *Python, Pandas, Scikit-learn, Matplotlib, Jupyter Notebooks*

Traffic Volume Analysis — Exploratory Data Analysis

- Conducted end-to-end EDA on traffic count datasets to identify peak periods, seasonal trends, and anomalies
- Produced clear visual summaries of traffic patterns and flow metrics using Python visualization libraries
- Derived actionable insights to support traffic management decision-making

Tech: *Python, Pandas, NumPy, Matplotlib, Seaborn*

House Prices Prediction & Analysis — Codveda Internship Project

- Cleaned and preprocessed the Boston Housing dataset (14 features), conducted EDA using correlation heatmaps, scatter plots, and distribution plots to identify key price drivers
- Trained and evaluated Regression and Classification models (Linear Regression, Random Forest, Logistic Regression) using MSE, R^2 , Accuracy, F1-Score, ROC Curve, and AUC metrics
- Applied K-Means Clustering with PCA dimensionality reduction to segment neighbourhoods by transport and housing characteristics, and ranked feature importances from the Random Forest model

Tech: *Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly Express, Jupyter Notebooks*

Automation & Data Pipeline Projects

- Python Weather Notifier: Built a data-fetching pipeline integrating OpenWeatherMap API with automated Twilio SMS alerts
- ISS Overhead Tracker: Engineered a real-time API data consumer with automated notification logic

EDUCATION

B.Tech – Logistics and Transport Technology | Federal University of Technology, Akure (FUTA) 2021 – 2027 (Expected)

- Relevant coursework: Systems Analysis, Transportation Economics, Data-Driven Decision Making
- Applying machine learning and statistical methods to transport and logistics problems as part of academic research

WORK EXPERIENCE

Mathematics Teacher | Ark-Norm Schools

2021 – 2024

- Taught statistics, algebra, and data interpretation to secondary school students
- Developed analytical teaching frameworks that strengthened students' quantitative reasoning

CERTIFICATIONS

Machine Learning Beginner — Sololearn | Completed

- Gained foundational knowledge of core ML concepts including supervised learning, model evaluation, and data preprocessing

The Python Pro Bootcamp(100days of Code) – Udemy | Completed [\(Certificate\)](#)

- Completed training in Python programming, data science, automation, and web development

Tutor: *Dr. Angela Yu*

Machine Learning A-Z – Udemy (in-progress)

- Currently covering: supervised/unsupervised learning, model evaluation, and data preprocessing using Python & R

Tutor: *Kirill Eremenko, Hadelin de Ponteves, SuperDataScience Team*
